

Pond water-test record

Write the test brand, reporting basis and units before comparing readings. A blank cell means not tested.

Pond: _____ Test kit / meter models: _____

Method / units key (include NO2-N versus NO2, NO3-N versus NO3, and the ammonia method): _____

Date / time	Temp. (°C)	pH	KH / unit	GH / unit	Ammonia / unit + basis	Nitrite / unit + basis	Nitrate / unit + basis	Oxygen mg/L	Changes, products or follow-up

Keep the method consistent. Use the sample volume and reading time in the current instructions. Record source-water results separately and note recent feeding, refills, treatments or filter work. A total-ammonia reading is not a direct free-NH3 result, and air-pump output is not dissolved oxygen.
